[illegible]

Figure 1 illustrates the experimental setup. A participant is seated at a table, interacting with a system that includes a computer, a monitor, and a small screen on the table. The monitor displays a 3D model of a building with a red arrow indicating a path. The small screen on the table displays a 2D map of the building. The participant is holding a controller and looking at the monitor. The participant is also looking at the small screen on the table, which displays a 2D map of the building.

[illegible]

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases.

[illegible]

Figure 6. The effect of the number of iterations on the accuracy of the proposed algorithm. The results are shown for different values of α and β . The x-axis represents the number of iterations (0 to 100), and the y-axis represents the accuracy (0.8 to 1.0). The legend indicates four cases: $(\alpha = 0.9, \beta = 0.9)$, $(\alpha = 0.9, \beta = 0.7)$, $(\alpha = 0.7, \beta = 0.9)$, and $(\alpha = 0.7, \beta = 0.7)$.
